

Water Solutions Pack 2008

For iFIX 4.5 and 5.0

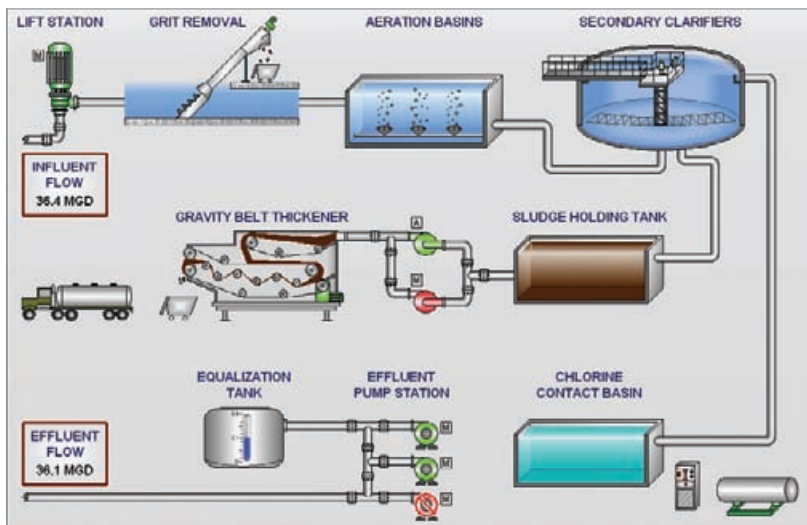

Combining extensive water industry expertise, advanced technologies and a market leadership position, GE Fanuc Intelligent Platforms offers the Water Solutions Pack 2008—a powerful offering designed to help you reduce costs, improve quality and secure your operations for a sustainable advantage.

REDUCE – Deployment and Ownership Costs

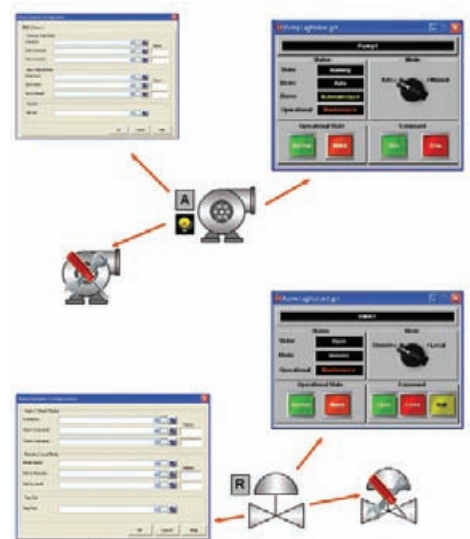

The Water Solutions Pack 2008 comes with over 650 new pre-configured graphic objects called Dynamos—ranging from basic pumps/valves/tanks to more complex clarifiers/digesters and capital equipment specially designed for Water/

Wastewater applications. These water-specific graphic objects combined with the regular iFIX graphic objects provide easy and consistent configuration of applications, thus reducing deployment and ownership costs.

We have taken the regular pre-configured graphic objects to the next level with pre-scripted graphic objects for ready out-of-the-box configuration capability. These objects have been pre-programmed to perform basic functions in addition to animations these objects need to display.

Industry-Specific Water/Wastewater Dynamos provide consistent and easy configuration.

Advanced configuration tools reduce deployment time.

Water Solutions Pack 2008

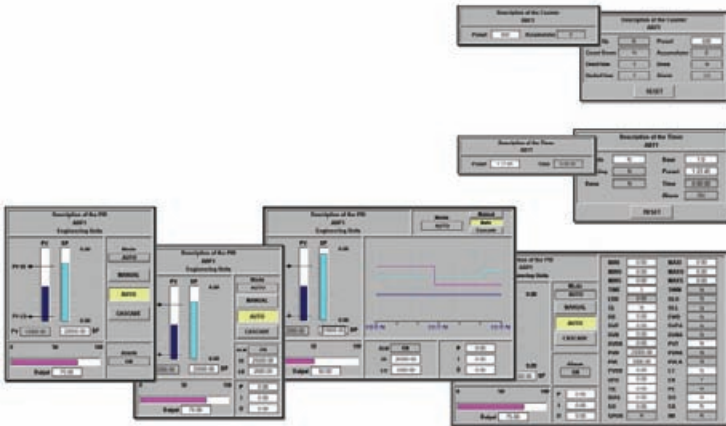

The Discover and Auto Configure productivity tool reduces configuration time and allows a consistent way of mapping the SCADA and PLC applications. Users can read in PLC configuration through PLC program files and use that information to create iFIX database tags, configure drivers, load pre-built database structures and pre-built objects, and define the Historian collection.

IMPROVE – Data Management and Quality of Reporting

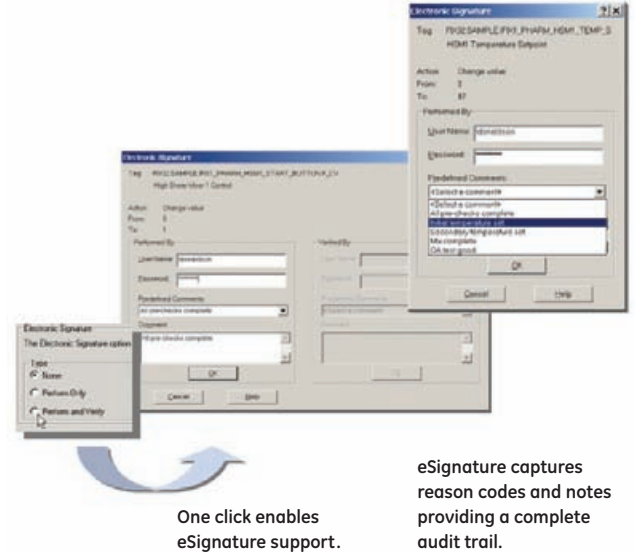

Tighter integration with OPS Systems' Reporting Solution enables users to quickly interface with those systems and view reports without ever leaving iFIX screens.

SECURE – Enhance System and Operation Security

Users can leverage an Electronic Signature option and a Biometric Productivity Pack for added security, audit trails and compliance with NERC standards.

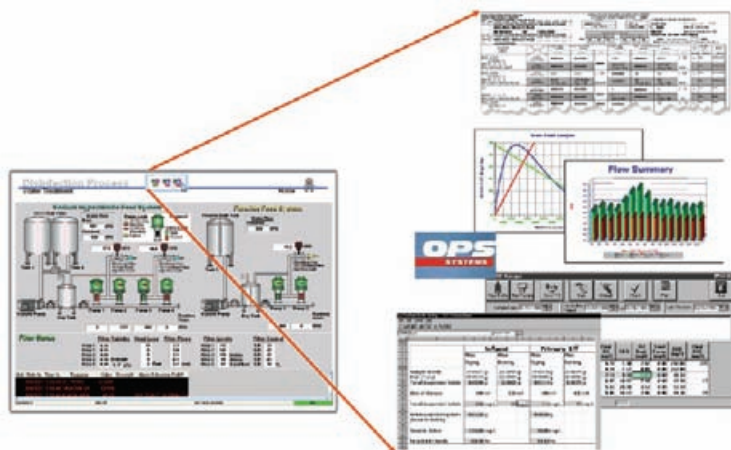

The Discover and Auto Configure productivity tool.

One click enables eSignature support.

eSignature captures reason codes and notes providing a complete audit trail.

Prebuilt dynamos to view OPS Systems' reports.
